

Brainstorm & Idea Prioritization

Auto-Ticket Classification using Flow Designer

Evaluating solution approaches

1. Brainstormed Ideas

#	Idea	Approach
1	Manual Category Selection	Student picks category from a dropdown list.
2	Keyword-Based Flow Designer	Flow Designer checks short description for keywords and auto-assigns category.
3	Rules Machine Learning Classifier	Train an NLP model on historical tickets to predict category.
4	Chatbot-Guided Submission	A chatbot asks questions and determines the category interactively.

2. Prioritization Matrix

Idea	Feasibility	Impact	Complexity	Selected
Manual Selection	High	Low	Low	No
Keyword Flow Designer	High	High	Medium	YES
ML Classifier	Medium	High	High	No (future)
Chatbot Guided	Medium	Medium	High	No

3. Selected Approach

Keyword-Based Flow Designer Rules was selected because it provides high impact (automatic classification) with high feasibility (native ServiceNow capability) and moderate complexity. It requires no external dependencies, no training data, and can be extended with additional rules in future sprints.

4. Implementation Evidence
