

PROJECT DESIGN PHASE-II

Data Flow Diagram & User Stories

Date	01 October 2026
Team ID	SWTID-2026-9397
Project Name	Auto-Ticket Classification using Flow Designer
Maximum Marks	4 Marks

Data Flow Diagram

The DFD shows how ticket information moves from the student into the School IT Ticket record, how Flow Designer processes the short description, and how the resulting classification and notification support the helpdesk process.

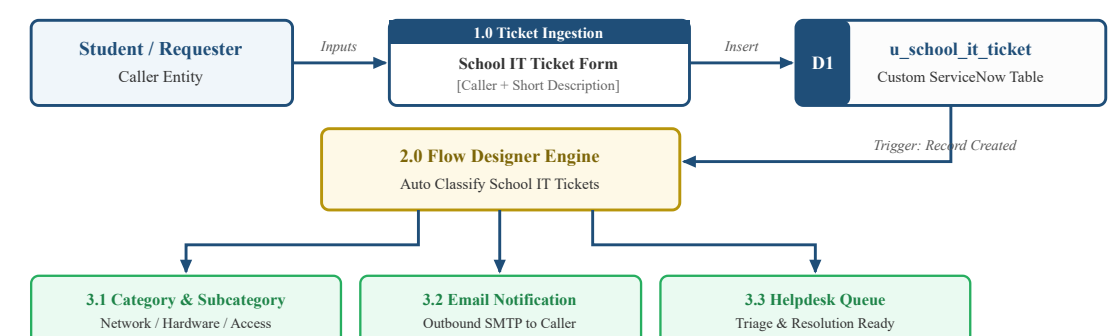

Figure 1: Data flow for the automatic classification process.

Data Flow Diagram Process Explanation

Step-by-Step Data Flow Breakdown:

- Entity to Interface:** The Student/Requester enters their Caller identity and issue Short Description into the School IT Ticket Form.
- Form to Data Store:** On submit, the data is persisted into the custom ServiceNow table (u_school_it_ticket).
- Data Store to Automation:** Record creation triggers the *Auto Classify School IT Tickets* Flow Designer workflow asynchronously.
- Keyword Evaluation Node:** Flow Designer inspects the text for predefined issue keywords (network, hardware, password, performance).
- Outputs & Dispatches:** Flow Designer updates Category and Subcategory fields, fires an automated Email Notification to the Caller, and queues the ticket for Helpdesk Processing.

User Stories

The user stories are written for the student, IT helpdesk technician, and administrator. Acceptance criteria describe the expected result of each story.

User Type	Functional Requirement (Epic)	User Story No.	User Story / Task	Acceptance Criteria	Priority & Release
Student	Ticket Submission	US-01	As a student, I can create a School IT Ticket by entering Caller and Short Description.	A ticket record is created with the submitted information.	High / Rel-1
Student	Automatic Classification	US-02	As a student, I can submit a ticket without manually selecting the technical category.	The flow detects supported keywords and sets Category and Subcategory.	High / Rel-1
Student	Email Notification	US-03	As a student, I receive an acknowledgment email after submitting a request.	An email is generated to the Caller email address.	High / Rel-1
Helpdesk Technician	Ticket Processing	US-04	As a technician, I can view tickets together with their classification.	Category and Subcategory are available on the ticket.	High / Rel-1
Administrator	Configuration	US-05	As an administrator, I can maintain ticket fields and dependent choices.	The custom table supports the required fields and Category/Subcategory relationship.	Medium / Rel-1
Administrator	Security and Change Tracking	US-06	As an administrator, I can control access and track customizations.	ACL/role controls exist and changes are captured in the Project Update Set.	High / Rel-1
