

PROJECT DESIGN PHASE-II

Solution Requirements (Functional & Non-functional)

Date	01 October 2026
Team ID	SWTID-2026-9397
Project Name	Auto-Ticket Classification using Flow Designer
Maximum Marks	4 Marks

Functional Requirements

The functional requirements define what the solution must do for the student, helpdesk technician, and administrator.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Ticket Submission	Enter Caller; enter Short Description; create School IT Ticket record.
FR-2	Automatic Classification	Flow Designer reads Short Description; checks for predefined keywords.
FR-3	Category / Subcategory Update	Updates Category and Subcategory for network, hardware, access, performance.
FR-4	Requester Notification	Generates acknowledgment email confirming ticket receipt.
FR-5	Ticket Processing	Helpdesk technicians view tickets and classification in ticket list.
FR-6	Configuration & Security	Custom table, dependent choices, ACL security, Update Set change tracking.

Non-Functional Requirements

NFR No.	Requirement Type	Description
NFR-1	Usability	Simple ticket form requiring only Caller and Short Description.
NFR-2	Security	Custom table protected by ServiceNow roles and Access Control Lists.
NFR-3	Maintainability	Classification rules maintained directly in Flow Designer without script editing.
NFR-4	Traceability & Reliability	Customizations captured in dedicated Update Set with deterministic keyword execution.
NFR-5	Accessibility & Availability	Accessible via ServiceNow platform within the standard browser experience.

Requirements Traceability & Architecture Flow

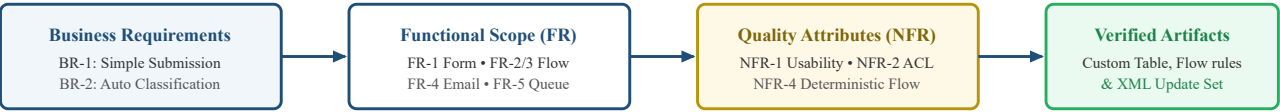

Figure 1: Requirements traceability and implementation architecture flow.

Requirement Evidence

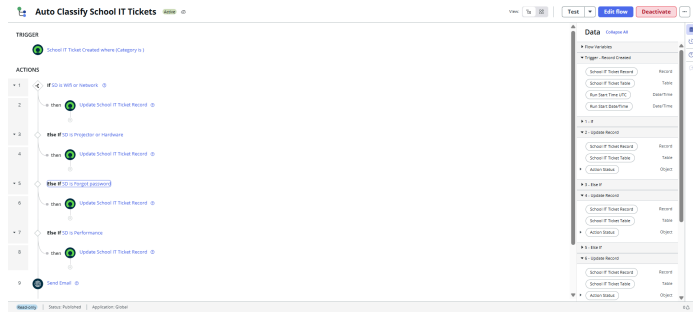

Figure 2: Flow Designer implementation of the automatic classification requirement.

The screenshot shows the 'School IT Ticket' form in ServiceNow. The form includes fields for 'Number' (TK10001012), 'Caller' (System Administrator), 'Short description' (Wi-Fi not working in library), 'Description', 'Category' (Network), 'Subcategory' (Wi-Fi), 'State' (None), 'Assigned Group', and 'Assigned to'. There are 'Update' and 'Delete' buttons at the bottom.

Figure 3: School IT Ticket form used for submission.

Number	Assigned Group	Assigned to	Caller	Category	Description	Short description	State	Subcategory
TKT0001010	(empty)	(empty)	(empty)			Wi-Fi not working in library		
TKT0001013	(empty)	(empty)	System Administrator	Hardware		Projector not turning on		
TKT0001011	(empty)	(empty)	System Administrator			Wi-Fi not working in library		
TKT0001012	(empty)	(empty)	System Administrator	Network		Wi-Fi not working in library		

Figure 4: Created School IT Ticket records.

Requirements Verification Summary

The implementation evidence demonstrates that all functional and non-functional requirements have been satisfied:

- **FR-1 & NFR-1:** Figure 3 confirms the simplified submission form requiring only Caller and Short Description.
- **FR-2, FR-3 & NFR-4:** Figure 2 illustrates Flow Designer condition branches that evaluate keywords and update Category/Subcategory automatically upon ticket creation.
- **FR-5 & NFR-5:** Figure 4 shows created ticket records displayed in the School IT Tickets list view, accessible to helpdesk staff.
- **FR-6 & NFR-2:** Access controls (ACLs) protect table operations, while Update Sets capture all schema and workflow modifications.
