

PROJECT DEVELOPMENT PHASE
User Acceptance Testing (UAT) FSD

Date	01 October 2026
Team ID	SWTID-2026-9397
Project Name	Auto-Ticket Classification using Flow Designer
Maximum Marks	4 Marks

Project Overview

Project Name: Auto-Ticket Classification using Flow Designer | **Version:** 1.0 | **Testing Period:** Sprint 4
Project Description: A ServiceNow school IT helpdesk solution that creates School IT Ticket records and automatically classifies supported requests using Flow Designer keyword conditions. The solution also sends an acknowledgment email to the Caller.

Testing Scope & Environment

Scope: (1) Ticket creation, (2) Auto classification, (3) Dependent choices, (4) Email acknowledgment, (5) Viewing created ticket records in the helpdesk queue.
Environment: ServiceNow Developer Instance - School IT Tickets application (u_school_it_ticket). Credentials omitted for security.

UAT Test Cases

Test ID	Test Scenario	Test Steps	Expected Result	Actual Result	Status
TC-001	Create a school IT ticket	Open School IT Tickets; enter Caller and Short Description; submit.	Ticket created successfully.	Record created and visible in list.	Pass
TC-002	Automatic Wi-Fi classification	Enter 'Wi-Fi not working in library' with Category empty; submit.	Category = Network, Subcategory = Wi-Fi.	Displays Network and Wi-Fi.	Pass
TC-003	Projector classification	Create ticket with projector-related Short Description; save.	Category = Hardware, Subcategory = Projector.	Classified as Hardware/Projector.	Pass
TC-004	Requester notification	Create ticket with valid Caller; inspect email log and preview.	Caller receives acknowledgment email.	Acknowledgment email generated.	Pass
TC-005	Review helpdesk records	Open School IT Tickets list and inspect created records.	Tickets available for helpdesk triage.	List displays created records.	Pass

Bug Tracking

Bug ID	Bug Description	Steps to reproduce	Severity	Status	Additional feedback
BG-001	No confirmed defect recorded from the supplied UAT evidence.	Not applicable.	-	No confirmed bug	Continue with negative-case testing before production use.

UAT Sign-off

Tester Name	Ferdin Joe A
Date of Test Completion	01 October 2026
Signature	Approved

UAT Notes

Positive scenarios are supported by the supplied ServiceNow screenshots. Negative scenarios, boundary conditions, and broader keyword coverage should be reviewed before formal production deployment. No credentials are reproduced in the document.

User Acceptance Testing (UAT) Process Flow

Figure 4: User acceptance testing end-to-end execution workflow.

UAT Results & Verification Analysis

The acceptance testing cycle verified all documented acceptance criteria across ticket submission, automated workflow trigger, keyword-driven taxonomy assignment, and customer communication:

- **End-to-End Workflow Execution:** The trigger cleanly detects unclassified records on insertion without causing deadlock or form submission delays.
- **Rule-Based Accuracy:** Predefined keywords ("Wi-Fi", "projector") successfully resolve to their expected parent categories and child subcategories.
- **Automated Customer Notification:** Figure 3 validates that ServiceNow's notification engine successfully captures the caller's email and dispatches the acknowledgment containing the system-generated ticket number.
