Customer Problem Statement

The project considers two primary users: the student who raises the IT request and the helpdesk technician who processes it. The statements below describe their goal, barrier, reason for the barrier, and resulting feeling.

Problem Statement	I am	I'm trying to	But	Because	Which makes me feel
PS-1	A student using the school IT helpdesk	Submit an IT request quickly and correctly	I may not know the correct category or subcategory	Different IT issues require different classifications	Confused and frustrated
PS-2	An IT helpdesk technician	Process and resolve tickets efficiently	I have to manually review and classify tickets	Students may not select the correct category	Additional time is spent on ticket triage

PS-1

I am a student using the school IT helpdesk. I am trying to submit an IT support request quickly and correctly, but I may not know which technical category or subcategory to select because different IT issues require different classifications, which makes me feel confused and frustrated.

PS-2

I am an IT helpdesk technician. I am trying to process and resolve incoming support requests efficiently, but I have to manually review and classify tickets because students may not select the correct category for their issues, which makes me feel that additional time is being spent on ticket triage instead of troubleshooting.
