

Acceptance Testing

UAT Execution & Report Submission

Date	
Team ID	
Project Name	Auto-Ticket Classification using Flow Designer
Maximum Marks	4 Marks

1. Purpose of Document

The purpose of this document is to summarize the User Acceptance Testing coverage for the Auto-Ticket Classification using Flow Designer project and to record the implementation evidence available at the time of UAT review. The report focuses on ticket creation, automatic classification, notification, and helpdesk record visibility.

2. Defect Analysis

No confirmed defect records were supplied in the project evidence provided for this report. Therefore, this section records the defect status without inventing severity totals or resolution counts.

Defect Status	Severity 1	Severity 2	Severity 3	Severity 4	Subtotal
Confirmed defects supplied	0	0	0	0	0
Open defects supplied	0	0	0	0	0
Overall documented defect count	0	0	0	0	0

The supplied implementation evidence shows the workflow operating for the demonstrated scenarios. Any future defects identified during broader negative or load testing should be added to the defect log with severity, reproduction steps, and status.

3. Test Case Analysis

The UAT analysis below summarizes the executed acceptance checks and separates functional scenarios from tests that were not applicable to the implemented solution or were not measured in the supplied evidence.

Section	Total Cases	Not Tested	Fail	Pass
Ticket Submission	1	0	0	1
Automatic Classification	2	0	0	2
Email Notification	1	0	0	1
Ticket Record Review	1	0	0	1
Performance Measurement	1	1	0	0
External API / File Load	2	2	0	0
Total	8	3	0	5

4. UAT Test Coverage Summary

Test ID	Scenario	Expected Result	Actual Result	Status
TC-001	Create School IT Ticket	Ticket record is created with Caller and Short Description.	Ticket records were created and are visible in the School IT Tickets list.	Pass
TC-002	Automatic Wi-Fi Classification	Category = Network and Subcategory = Wi-Fi.	The demonstrated Wi-Fi ticket shows Network and Wi-Fi.	Pass
TC-003	Projector / Hardware Classification	Projector issue is mapped to Hardware / Projector.	The ticket list shows a projector request classified as Hardware.	Pass
TC-004	Email Acknowledgment	Acknowledgment email is generated for the Caller.	Email log and preview show the notification was generated.	Pass
TC-005	Ticket List Review	Created tickets remain available for helpdesk processing.	The School IT Tickets list displays the created records.	Pass
PT-001	Response Time Measurement	Execution time is measured and documented.	No timing measurement was supplied.	Not Tested
PT-002	Concurrent API Load	API remains responsive under concurrent calls.	Not applicable; no external classification API is used.	N/A
PT-003	File Upload Load	Multiple files process without failure.	Not applicable; file upload is not part of this workflow.	N/A

5. Implementation Evidence

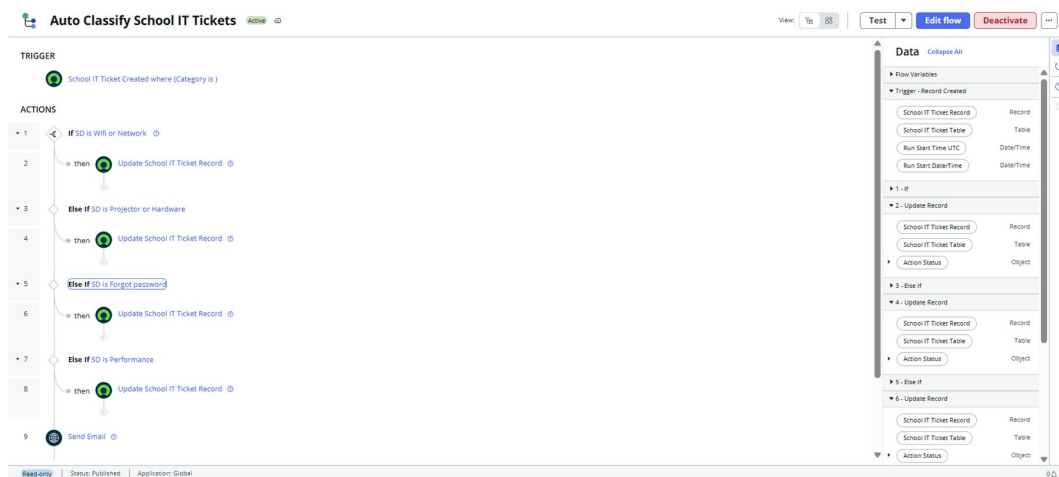

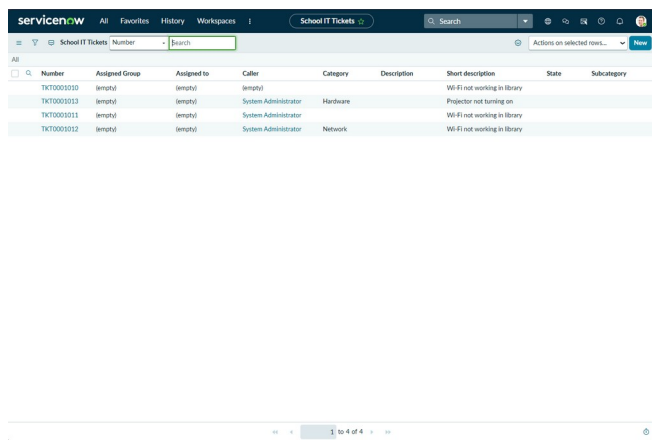

Figure 1: Published Auto Classify School IT Tickets flow used for the automated classification process.

Figure 2: School IT Ticket showing the automatic Network and Wi-Fi classification result.

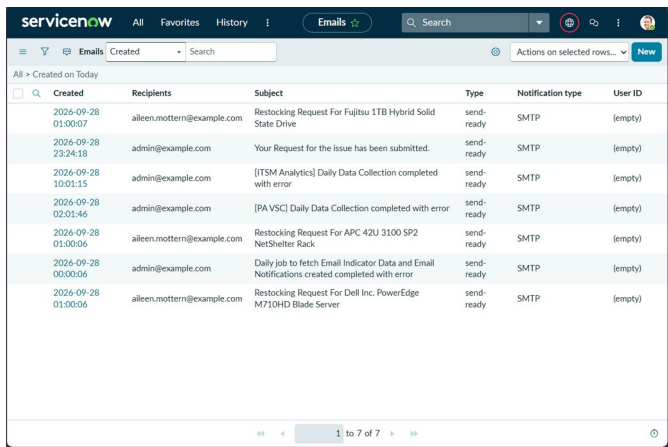

6. UAT Notification and Record Evidence

The screenshot shows the ServiceNow interface for 'School IT Tickets'. The table lists four tickets with their respective details.

Number	Assigned Group	Assigned to	Caller	Category	Description	Short description	State	Subcategory
TKT00001010	(empty)	(empty)	(empty)			Wi-Fi not working in library		
TKT00001011	(empty)	(empty)	System Administrator	Hardware		Projector not turning on		
TKT00001011	(empty)	(empty)	System Administrator			Wi-Fi not working in library		
TKT00001012	(empty)	(empty)	System Administrator	Network		Wi-Fi not working in library		

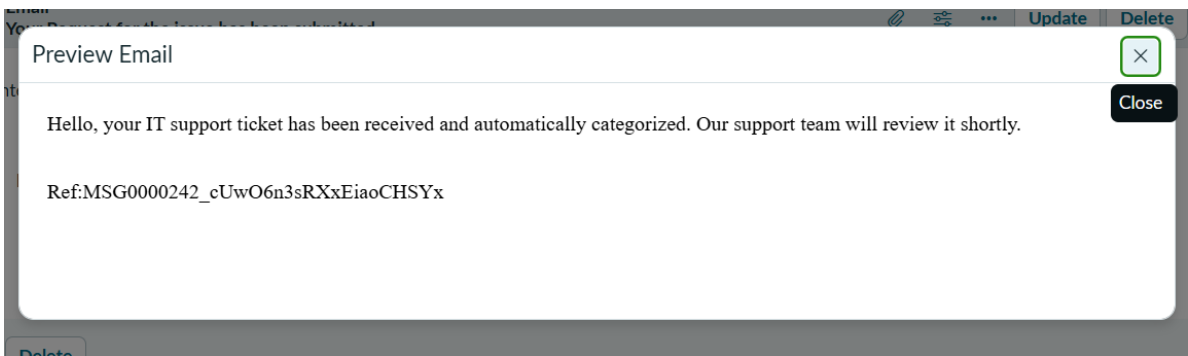

Figure 3: School IT Tickets list showing created ticket records.

The screenshot shows the ServiceNow 'Emails' log for tickets created today. It lists seven email events with their recipients, subjects, and notification types.

Created	Recipients	Subject	Type	Notification type	User ID
2026-09-28 01:00:07	aileen.mottern@example.com	Restocking Request For Fujitsu 1TB Hybrid Solid State Drive	send-ready	SMTP	(empty)
2026-09-28 23:24:18	admin@example.com	Your Request for the issue has been submitted.	send-ready	SMTP	(empty)
2026-09-28 10:01:15	admin@example.com	[ITSM Analytics] Daily Data Collection completed with error	send-ready	SMTP	(empty)
2026-09-28 02:01:46	admin@example.com	[PA VSC] Daily Data Collection completed with error	send-ready	SMTP	(empty)
2026-09-28 01:00:06	aileen.mottern@example.com	Restocking Request For APC 42U 3100 SP2 NetShelter Rack	send-ready	SMTP	(empty)
2026-09-28 00:00:06	admin@example.com	Daily job to fetch Email Indicator Data and Email Notifications created completed with error	send-ready	SMTP	(empty)
2026-09-28 01:00:06	aileen.mottern@example.com	Restocking Request For Dell Inc. PowerEdge M710HD Blade Server	send-ready	SMTP	(empty)

Figure 4: ServiceNow Email log showing the acknowledgment notification.

The screenshot shows a 'Preview Email' dialog box with the following content:

Preview Email

Hello, your IT support ticket has been received and automatically categorized. Our support team will review it shortly.

Ref:MSG0000242_cUwO6n3sRXxEiaoCHSYx

Buttons: Update, Delete, Close

Figure 5: Preview of the acknowledgment email generated for the requester.

7. UAT Conclusion

The implemented ServiceNow workflow satisfies the demonstrated acceptance scenarios for ticket creation, automatic classification, ticket record visibility, and requester notification. The report deliberately does not assign unsupported performance measurements or external-API results. Additional negative-case and load testing can be performed before production deployment.
