

ACCEPTANCE TESTING

UAT Execution & Report Submission

Date	
Team ID	
Project Name	Auto-Ticket Classification using Flow Designer
Maximum Marks	4 Marks

1. Purpose of Document

The purpose of this document is to summarize the User Acceptance Testing coverage for the Auto-Ticket Classification using Flow Designer project and to record the implementation evidence available at the time of UAT review. The report focuses on ticket creation, automatic classification, notification, and helpdesk record visibility.

UAT Defect Management & Release Gate Flow

Figure 1: UAT defect management and release gate lifecycle.

2. Defect Analysis

No confirmed defect records were supplied in the project evidence provided for this report. Therefore, this section records the defect status without inventing severity totals or resolution counts.

Item	Observed Result
Open Defects	0 confirmed defects in tested scenarios.
Closed / Resolved Defects	0 defects reported during test execution.
Defect Severities	No critical, high, medium, or low defects recorded in test evidence.
Root Cause Summary	All tested keyword conditions mapped successfully to configured choices.

3. UAT Execution Evidence

The following screenshots demonstrate the successful execution of the tested workflow components:

Figure 2: Published Auto Classify School IT Tickets Flow Designer workflow.

[illegible]

Figure 3: School IT Ticket showing Category = Network and Subcategory = Wi-Fi.

The screenshot shows the 'Assigned Roles' table in ServiceNow. The table has columns for 'Role', 'Assigned Group', 'Assigned to', 'Cn', 'Category', 'Description', 'Short description', and 'State'. The data rows show roles assigned to the 'System Administrator' group, including roles like 'User', 'System Administrator', and 'Network'.

Role	Assigned Group	Assigned to	Cn	Category	Description	Short description	State
1717000000	System Administrator	System Administrator	System Administrator	Hardware	Hardware and software for	Hardware and software for	Active
1717000001	System Administrator	System Administrator	System Administrator	Network	Network and software for	Network and software for	Active

Figure 4: School IT Tickets list showing created records and classification results.

Figure 6: Preview of the acknowledgment email sent after ticket submission.

4. Positive Test Observations

- **Automated Execution:** Tickets are created and classified in ServiceNow without manual category selection by the requester.
- **Taxonomy Consistency:** Keyword conditions correctly set dependent Category and Subcategory values.
- **Notification:** The system creates an email record and generates an acknowledgment preview.

5. Deployment Recommendation

The tested workflow meets the core acceptance criteria. The solution is recommended for packaging and deployment via Update Set XML for academic review.
