

Empathize & Discover - Empathy Map

Auto-Ticket Classification using Flow Designer

Understanding the student and technician experience

1. Empathy Map - Student (Requester)

Dimension	Observation
Says	I just need my Wi-Fi fixed. / I do not know which category to pick.
Thinks	Hopes the request reaches the right person quickly.
Does	Enters a short description of the issue; submits the ticket.
Feels	Frustrated by technical dropdowns; relieved when confirmation arrives.

2. Empathy Map - IT Helpdesk Technician

Dimension	Observation
Says	Half these tickets are in the wrong category.
Thinks	Wishes tickets arrived pre-sorted so they can start fixing immediately.
Does	Manually reviews and re-categorizes incoming tickets.
Feels	Overwhelmed by repetitive triage; motivated when workflow is smooth.

3. Key Insights

- Students lack technical vocabulary - category selection creates friction.
- Technicians spend significant time on triage instead of resolution.
- Immediate acknowledgment builds student trust in the process.
- Automation of classification directly addresses both pain points.
