

GenAI Functional & Performance Testing

Auto-Ticket Classification using Flow Designer

Functional testing and performance validation

1. Test Strategy

Testing validates that the Flow Designer workflow correctly classifies tickets for supported keyword categories and sends email notifications. Test cases cover positive matches, boundary conditions, and unsupported descriptions.

2. Functional Test Cases

TC #	Test Scenario	Input (Short Description)	Expected Category	Expected Subcategory	Result
TC-01	Wi-Fi keyword detected	Wi-Fi not working in lab	Network	Wi-Fi / Connectivity	Pass
TC-02	Projector keyword detected	Projector display is blank	Hardware	Projector / Display	Pass
TC-03	Password keyword detected	Cannot reset my password	Access	Password / Login	Pass
TC-04	Performance keyword detected	System is very slow today	Performance	System Performance	Pass
TC-05	No keyword match	General question about IT	Not auto-classified	Not auto-classified	Pass
TC-06	Email notification sent	Wi-Fi not working	Email sent to	-	Pass

Caller

3. Performance Observations

Metric	Observation
Classification Speed	Flow executes immediately on record creation - no perceptible delay.
Email Delivery	Acknowledgment email generated within seconds of ticket submission.
Consistency	Repeated tests with same keywords produce identical classification.
Scalability	Flow processes each ticket independently; no degradation observed.
