

User Acceptance Testing - FSD

Auto-Ticket Classification using Flow Designer

Functional Specification for UAT

1. UAT Scope

User Acceptance Testing validates the solution from the end-user perspective. The student, technician, and administrator roles each verify their expected interactions.

2. UAT Scenarios

UAT #	Role	Scenario	Expected Outcome	Status
UAT-01	Student	Submit ticket with Wi-Fi issue description	Ticket created; Category = Network; email sent	Accepted
UAT-02	Student	Submit ticket with projector issue	Ticket created; Category = Hardware; email sent	Accepted
UAT-03	Technician	View classified ticket in list	Category and Subcategory visible on record	Accepted
UAT-04	Admin	Verify Update Set captures changes	All customizations listed in Update Set	Accepted
UAT-05	Admin	Verify ACL restricts unauthorized access	Unauthorized users cannot access table	Accepted

3. Acceptance Criteria Summary

- All supported keyword categories produce correct classification.
- Email acknowledgment is received by the student after submission.
- Technician can view pre-classified tickets without manual triage.
- Update Set contains all configuration changes for export.
