

Data Flow Diagrams & User Stories

Auto-Ticket Classification using Flow Designer

System data flow and user story definitions

1. Data Flow Diagram (DFD)

The DFD shows how ticket information moves from the student into the School IT Ticket record, how Flow Designer processes the short description, and how the resulting classification and notification support the helpdesk process.

Level 0 - Context Diagram

```

Student --[Caller + Short Description]--> School IT Ticket System --[Classified Ticket]--> Helpdesk Technician
      |
      [Email Acknowledgment]--> Student

```

Level 1 - Process Decomposition

Process	Input	Output	Data Store
P1: Create Ticket	Caller, Short Description	New ticket record	School IT Ticket table
P2: Classify Ticket	Short Description text	Category, Subcategory	School IT Ticket table
P3: Send Notification	Caller email, ticket info	Acknowledgment email	Email log

2. User Stories

ID	User Type	User Story	Acceptance Criteria	Priority
US-01	Student	As a student, I can create a ticket by entering Caller and Short Description.	A ticket record is created with submitted information.	High
US-02	Student	As a student, I can submit a ticket without manually selecting category.	Flow detects keywords and sets Category/Subcategory.	High
US-03	Student	As a student, I receive an acknowledgment email after submitting.	Email is generated to the Caller email address.	High
US-04	Technician	As a technician, I can view tickets with their classification.	Category and Subcategory are available on the ticket.	High
US-05	Admin	As an admin, I can maintain ticket fields and dependent	Custom table supports required fields and relationships.	Medium
US-06	Admin	As an admin, I can control access and track	ACL/role controls exist; changes captured in Update Set.	High

customizations.
