

Solution Requirements

Auto-Ticket Classification using Flow Designer

Functional & Non-Functional Requirements

1. Functional Requirements

FR #	Requirement (Epic)	Sub-Requirement (Story / Sub-Task)
FR-1	Ticket Submission	Enter Caller; enter Short Description; create the School IT Ticket record.
FR-2	Automatic Classification	Check Short Description for supported keywords; assign Category; assign Subcategory.
FR-3	Dependent Classification	Make Subcategory dependent on Category and show relevant choices.
FR-4	Email Notification	Send acknowledgment email to Caller after ticket creation.
FR-5	Ticket Processing	Store and display School IT Ticket records for helpdesk processing.
FR-6	Security & Change Tracking	Apply access controls; capture configuration changes in Project Update Set.

2. Non-Functional Requirements

NFR #	Requirement	Description
NFR-1	Usability	Student submits a ticket using basic information without understanding technical categories.
NFR-2	Security	Access to custom ticket table controlled through ServiceNow ACL and role configuration.
NFR-3	Reliability	Supported keywords consistently map to configured Category and Subcategory values.
NFR-4	Performance	Classification occurs automatically after record creation for supported requests.
NFR-5	Availability	Application accessible through ServiceNow School IT Tickets module.
NFR-6	Scalability	Same Flow Designer logic can process repeated School IT Ticket records.
