

PROJECT DESIGN PHASE Problem - Solution Fit Canvas ServiceNow School IT Helpdesk Automation	Date: 28 September 2026 Team ID: NM-2026-IT-042 Project Name: Auto-Ticket Classification using Flow Designer Maximum Marks: 4 Marks
--	--

PROBLEM - SOLUTION FIT CANVAS (10 STRATEGIC BLOCKS)

The Problem-Solution Fit Canvas verifies that the proposed ServiceNow automation directly solves the validated pains of both user segments with appropriate technical feasibility.

1. Customer Segment(s)

Primary: Students enrolled in the institution who use campus IT services.

Secondary: Helpdesk technicians and system administrators managing ServiceNow tickets.

2. Jobs-to-be-Done / Problems

Student: Submit an issue report easily and get immediate status confirmation.

Technician: Receive structured, pre-classified requests for rapid troubleshooting.

3. Triggers

Immediate technical interruptions: Wi-Fi disconnection, projector display failure, locked user accounts, forgotten passwords, or system lag during classes and lab sessions.

4. Emotions: Before / After

Before: Confusion over IT terminology, anxiety about delays, frustration with triage.

After: Confidence in automated acknowledgment, clarity, and faster time to resolution.

5. Available Alternative Solutions

Manual triage by frontline staff, phone calls to IT office, verbal complaints to teachers, or navigating complex enterprise forms with 20+ technical category options.

6. Customer Constraints

Non-technical background, limited time between classes, submission via varied devices (laptop, mobile), and reliance on institutional network access.

7. User Behaviour

Students provide concise, symptom-focused descriptions (e.g., "wifi down in library"). Technicians examine incoming queues periodically to route and resolve.

8. Channels of Behaviour

Online: ServiceNow Next Experience Portal, Email alerts.

Offline: Computer labs, digital classrooms, campus libraries, IT helpdesk counter.

9. Problem Root Cause

Standard ITSM platforms require technical classification at input time, shifting administrative categorization burden onto untrained end-users.

10. Implemented Solution & Fit Summary

A custom `u_school_it_ticket` table paired with a ServiceNow Flow Designer trigger that evaluates short descriptions against configured keyword rules to automatically assign Category/Subcategory and issue an acknowledgment email.

FIT SUMMARY ANALYSIS

The solution achieves a strong Problem-Solution Fit by decoupling user input from backend classification. The student provides simple, natural issue summaries, while Flow Designer handles categorization deterministically, eliminating triage overhead and ensuring immediate requester feedback.

IMPLEMENTATION EVIDENCE - FORM AND AUTOMATION

The screenshots below demonstrate the deployed ServiceNow solution addressing the validated user requirements.

The screenshot shows the 'School IT Ticket' form in ServiceNow. The form is titled 'School IT Ticket - TKT0001012'. It has a 'Number' field with the value 'TKT0001012', a 'Caller' field with the value 'System Administrator', a 'Short description' field with the value 'Wi-Fi not working in library', and a 'Description' field. The 'Category' is set to 'Network', 'Subcategory' is 'Wi-Fi', and 'State' is 'None'. There are also fields for 'Assigned Group' and 'Assigned to'. At the bottom, there are 'Update' and 'Delete' buttons.

Figure 1: School IT Ticket form used to enter caller and issue information without manual categorization.

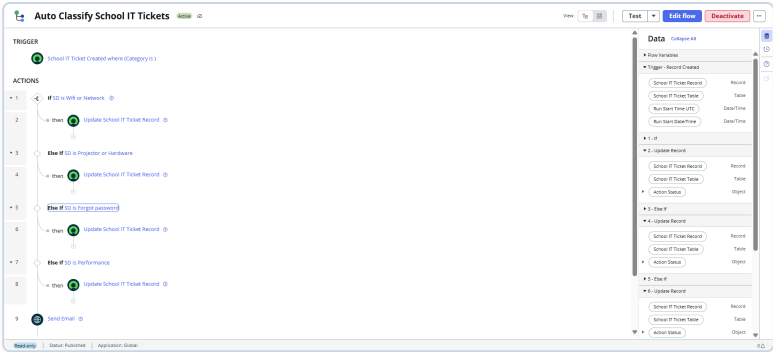

Figure 2: Published Auto Classify School IT Tickets Flow Designer workflow showing keyword condition branches.

IMPLEMENTATION EVIDENCE - CLASSIFICATION AND NOTIFICATION

The live test records below confirm that incoming tickets receive automated Category and Subcategory values and generate requester email notifications.

The screenshot shows a 'School IT Ticket' form in the 'servicenw' application. The form includes the following fields: 'Number' (TKT00000002), 'Caller' (System Administrator), 'Short description' (Wi-Fi not working in library), 'Description' (empty), 'Category' (Network), 'Subcategory' (Wi-Fi), 'State' (None), 'Assigned Group' (empty), and 'Assigned To' (empty). There are 'Update' and 'Delete' buttons at the bottom left of the form.

Figure 3: School IT Ticket showing Category automatically set to 'Network' and Subcategory to 'Wi-Fi'.

The screenshot shows a list of 'School IT Tickets' in the 'servicenw' application. The table has the following columns: Number, Assigned Group, Assigned To, Caller, Category, Description, Short description, State, and Subcategory. There are four records listed:

Number	Assigned Group	Assigned To	Caller	Category	Description	Short description	State	Subcategory
TKT00000000	default	default	default					
TKT00000001	default	default	System Administrator	Hardware	Projector not turning on	Projector not turning on		
TKT00000002	default	default	System Administrator	Network	Wi-Fi not working in library	Wi-Fi not working in library		

Figure 4: School IT Tickets list showing multiple records processed and classified in real time.

The screenshot shows an 'Email Acknowledgment Preview' window in the 'servicenw' application. The preview text is as follows:

Hello, your IT support ticket has been received and automatically categorized. Our support team will review it shortly.
