

Data Flow Diagram & User Stories

ServiceNow School IT Helpdesk Automation

Date: 28 September 2026
Team ID: NM-2026-IT-042
Project Name: Auto-Ticket Classification using Flow Designer
Maximum Marks: **4 Marks**

DATA FLOW DIAGRAM (LEVEL 0 / LEVEL 1)

The Data Flow Diagram illustrates how information transitions from the student into the ServiceNow platform, how Flow Designer evaluates the issue description, and how the resulting data updates the database and triggers outbound notifications.

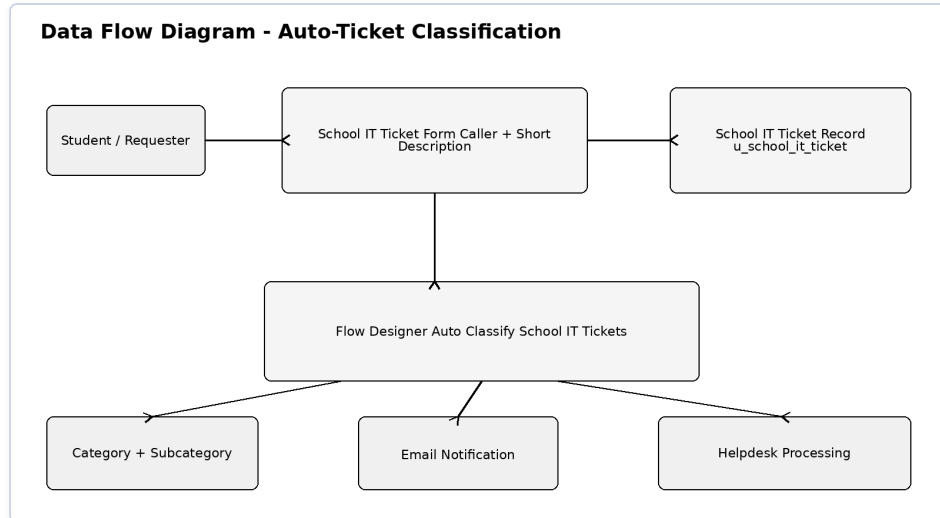

Figure 1: Data flow diagram for the automatic classification and notification process.

DATA FLOW PROCESS NARRATIVE

- **Data Flow 1 (Submission):** The Student enters Caller reference and Short Description into the UI form, creating a record in data store u_school_it_ticket.
- **Data Flow 2 (Trigger):** Creation of a new ticket record with an empty Category fires the *Record Created* trigger in Flow Designer.
- **Data Flow 3 (Rule Evaluation):** Process 2.0 extracts the Short Description text and passes it through keyword evaluation branches (Wi-Fi, Projector, Password, Performance).
- **Data Flow 4 (Update):** Process 3.0 writes the identified Category and Subcategory back to the ticket record.
- **Data Flow 5 (Notification):** Process 4.0 compiles the ticket reference and transmits an automated acknowledgment email to the Caller.
- **Data Flow 6 (Triage Queue):** The classified ticket appears immediately in the Technician's queue, organized by Category.

USER STORIES & ACCEPTANCE CRITERIA

User stories defined across the three key stakeholder groups (Student, Technician, Administrator):

User Type	Epic	Story ID	User Story Description	Acceptance Criteria	Priority
Student	Ticket Submission	US-01	As a student, I can create a School IT Ticket by entering Caller and Short Description.	Ticket record is created successfully with unique number and state 'New'.	High
Technician	Auto-Classification	US-02	As a technician, I want Wi-Fi issues auto-classified as Category=Network, Subcategory=Wi-Fi.	Flow Designer populates Network/Wi-Fi upon record creation.	High
Technician	Auto-Classification	US-03	As a technician, I want projector issues auto-classified as Category=Hardware, Subcategory=Projector.	Flow Designer populates Hardware/Projector automatically.	High
Student	Notification	US-04	As a student, I want an acknowledgment email after submitting my support request.	ServiceNow generates and logs outbound email with ticket details.	High
Technician	Schema Architecture	US-05	As a technician, I want Subcategory to dynamically filter based on Category selected.	Dependent choice relationship enforced on form and list views.	High
Admin	Security & Audit	US-06	As an admin, I can control access via ACLs and package changes into Update Sets.	ACLs restrict unauthorized edits; Update Set captures all XML changes.	High

IMPLEMENTATION EVIDENCE

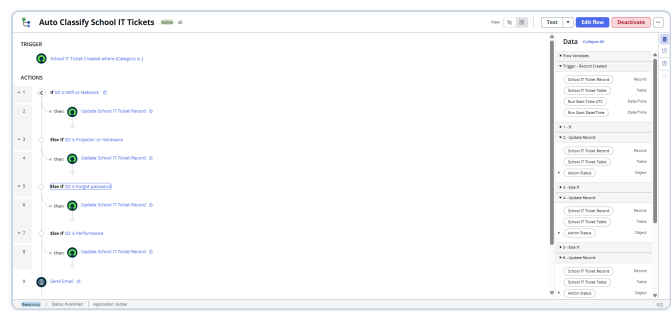

Figure 2: Published Auto Classify flow.

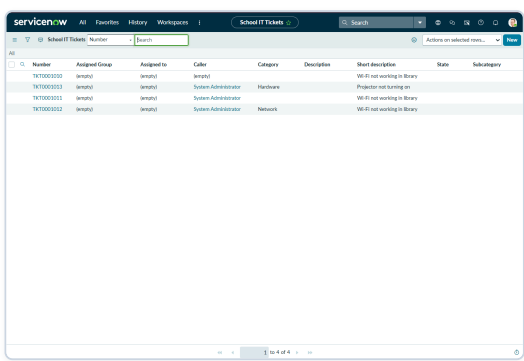

Figure 3: School IT Tickets list.

Sprint Lead: Aditya A (US-01, US-02)

Backend Lead: Akash N A (US-03 to US-06)

Marks: 4 Marks
