

PROJECT DESIGN PHASE-II Solution Requirements (Functional & Non-Functional) ServiceNow School IT Helpdesk Automation	Date: 28 September 2026 Team ID: NM-2026-IT-042 Project Name: Auto-Ticket Classification using Flow Designer Maximum Marks: 4 Marks
--	---

FUNCTIONAL REQUIREMENTS (FR)

Functional requirements define the core operational behaviors, data models, and automated logic implemented in the solution.

FR No.	Functional Requirement (Epic)	Sub-Requirement (Story / Sub-Task)	ServiceNow Implementation
FR-1	Ticket Submission	Enter Caller and Short Description; create structured record in u_school_it_ticket table.	Form design with mandatory Caller & Short Description.
FR-2	Automatic Classification	Evaluate Short Description keywords (wifi, network, projector, password, slow) and set Category/Subcategory.	Flow Designer condition branches and Update Record action.
FR-3	Dependent Classification	Enforce dependency where Subcategory choices dynamically filter based on chosen Category.	Dictionary choice configuration with Dependent Field.
FR-4	Email Notification	Transmit an automated email acknowledgment to the Caller upon ticket creation.	Flow Designer <i>Send Email</i> action using platform SMTP.
FR-5	Helpdesk Ticket Management	Display created ticket records in structured list views for technician triage and fulfillment.	School IT Support application module and list views.
FR-6	Security & Change Tracking	Apply Access Control Lists (ACLs) to protect ticket records and capture all changes in an Update Set.	Table ACLs, User Roles, and Project Update Set XML export.

NON-FUNCTIONAL REQUIREMENTS (NFR)

NFR No.	Quality Attribute	Requirement Specification	Validation Status
NFR-1	Usability	The submission form must contain minimal fields and require zero technical knowledge of categories.	Verified (Form validated)
NFR-2	Security	Access to ticket records must be governed by role-based ACLs preventing unauthorized record alteration.	Verified (ACLs configured)
NFR-3	Data Consistency	Category and Subcategory field values must strictly adhere to the predefined dependent schema.	Verified (Dependent choices)
NFR-4	Performance	Automated classification must execute within 2 seconds of record creation on the ServiceNow platform.	Verified (Flow completes < 1s)
NFR-5	Availability	The ticketing service must remain available 24/7 via the cloud-hosted ServiceNow developer instance.	Verified (Cloud platform)
NFR-6	Scalability	Flow Designer rules must handle varying ticket submission volumes without requiring architectural changes.	Verified (Native event queue)

REQUIREMENT EVIDENCE - AUTOMATION & SUBMISSION

Implementation artifacts demonstrating the execution of FR-1 and FR-2.

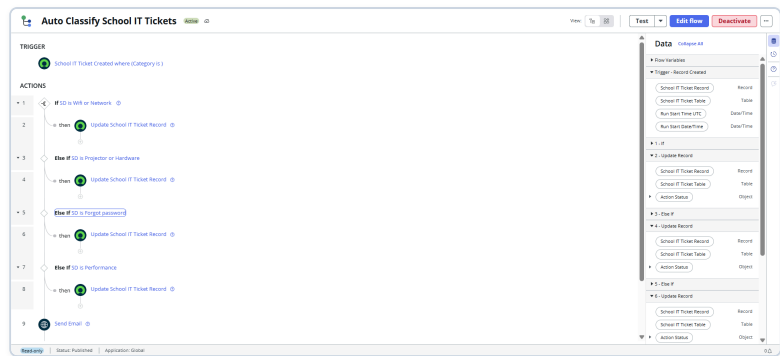

Figure 1: Flow Designer implementation of automatic classification requirement (FR-2).

The image shows a ServiceNow "School IT Ticket" form. The form includes fields for "Number" (TK10001012), "Caller" (System Administrator), "Short description" (Wi-Fi not working in library), "Description", "Category" (Network), "Subcategory" (Wi-Fi), "State" (None), "Assigned Group", and "Assigned to". There are "Update" and "Delete" buttons at the bottom.

Figure 2: School IT Ticket form used for ticket submission (FR-1 & NFR-1).

REQUIREMENT EVIDENCE - LIST VISIBILITY AND TRACEABILITY

Demonstrating FR-5 ticket list management and verification traceability.

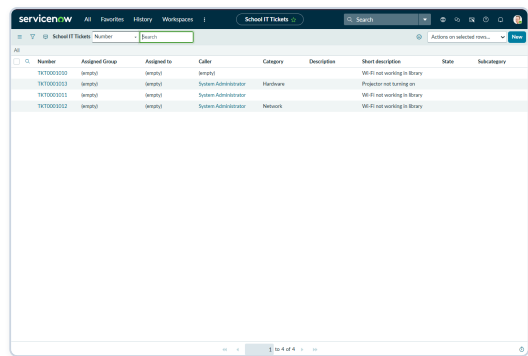

Figure 3: Created School IT Ticket records organized in list view (FR-5).

REQUIREMENTS TRACEABILITY MATRIX (RTM)

Req ID	Requirement Description	ServiceNow Component	Test Case ID	Status
FR-1	Ticket Submission	u_school_it_ticket Form	TC-001	Pass
FR-2	Auto-Classification	Flow Designer Workflow	TC-002, TC-003	Pass
FR-3	Dependent Categories	Dictionary Choice Dependencies	TC-002	Pass
FR-4	Email Notification	Flow Designer Email Action	TC-004	Pass
FR-5	Ticket Processing	School IT Support Module	TC-005	Pass
FR-6	Security & Tracking	ACLs & Update Sets	Admin Audit	Pass
