

PROJECT DESIGN PHASE-II

Customer Journey Map

Date	
Team ID	
Project Name	Auto-Ticket Classification using Flow Designer
Maximum Marks	4 Marks

Scenario

A student experiences an IT problem, raises a School IT Ticket, the system classifies the request automatically, and the helpdesk continues the service process.

Customer Journey

Stage	Typical experience	Interactions / touchpoints	Goal / motivation	Positive moment	Negative moment / Area of opportunity
Entice	Student notices an IT problem and decides it needs help.	Classroom, library, lab or office; may ask a teacher.	Report issue without technical knowledge.	Support route is identified quickly.	Neg: Unclear who to contact. Opp: Make ticketing link visible.
Enter	Student opens the ticketing service and sees submission fields.	School IT Tickets form in ServiceNow.	Simple form with clear, minimal fields.	Only basic fields are required.	Neg: Concern about picking category. Opp: Keep category optional.
Engage	Student fills caller information and describes problem.	Caller and Short Description fields; submit action.	Describe problem in plain words.	Quick submission without jargon.	Neg: Uncertainty about format. Opp: Helpful short description prompt.
Exit	System receives ticket and Flow Designer applies rules.	Ticket created in ServiceNow; automated flow executes.	Confirm request received and show assigned category.	Automatic category & immediate email.	Neg: Wondering if received. Opp: Acknowledgment email.
Extend	Helpdesk reviews categorized ticket and continues support.	School IT Tickets list; helpdesk technician queue.	Keep ticket records organized for resolution.	Ticket arrives pre-categorized for action.	Neg: Unclassified requests. Opp: Expand keywords.

5-Stage Customer Journey Flowchart

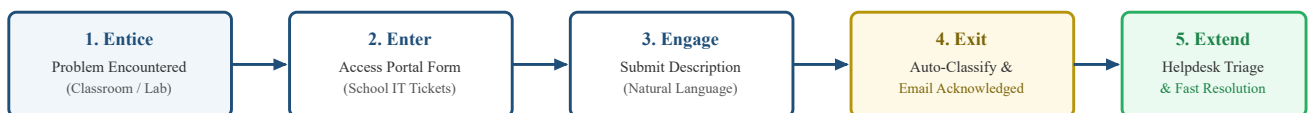

Figure 1: 5-stage customer journey flow across the school IT support lifecycle.

Customer Journey Process Flow Explanation

Five-Stage Journey Flow Breakdown: The customer journey transitions through five structured phases: (1) **Entice:** The student recognizes an issue and locates the School IT helpdesk route; (2) **Enter:** The student accesses the streamlined submission form; (3) **Engage:** The student inputs caller identity and describes the problem in plain English; (4) **Exit:** Flow Designer triggers automatically to classify the record and sends an email acknowledgment; (5) **Extend:** The helpdesk technician receives a structured, pre-classified ticket in their queue for prompt resolution.

Journey Validation Analysis

The implementation evidence directly verifies the successful execution of the customer journey stages:

- Figure 2 validates the *Enter* and *Engage* stages: students are presented with a clean, uncluttered interface requiring only essential details.
- Figure 3 validates the *Extend* stage: tickets appear in the helpdesk list with appropriate status and classification data populated.
- Figure 4 validates the *Exit* stage: the requester receives immediate confirmation that their support request has been logged and classified.
