Date	
Team ID	
Project Name	Auto-Ticket Classification using Flow Designer
Maximum Marks	4 Marks

Empathy Map - Student

The student is the primary requester. The map captures the student's concerns, environment, behaviour, pain points and expected benefits when submitting an IT helpdesk request.

THINK & FEEL	HEAR
- I just want to report my IT problem. - I may not know which category to select. - I want the issue to reach the right support team. - I want a quick submission process.	- Select the appropriate category. - Provide problem details. - Choose the correct subcategory. - Instructions from teachers or IT staff.
SEE	SAY & DO
- Helpdesk ticket form - Several technical categories - Different subcategories - Technical terminology	- My Wi-Fi is not working. - The projector is not working. - I forgot my password. - My computer is very slow. - Enter Caller and Short Description and submit.
PAIN	GAIN
- Category confusion - Wrong selection - Extra submission effort - Possible processing delay	- Simple ticket submission - Automatic classification - Correct routing - Faster processing - Confirmation email

Empathy Map - IT Helpdesk Technician

The technician is the secondary user. The map focuses on the manual triage effort, the need for consistent classification, and the expected benefit from automation.

THINK & FEEL	HEAR
- Wants correctly classified tickets. - Wants less manual triage. - Wants to begin troubleshooting quickly. - Wants consistent classification.	- Student IT complaints. - Requests for quick resolution. - Questions about ticket status.
SEE	SAY & DO
- New IT tickets - Different issue descriptions - Categories and subcategories - Unclassified requests	- Review incoming tickets. - Identify the issue. - Classify category and subcategory. - Process and resolve the ticket.
PAIN	GAIN
- Manual classification - Repetitive triage - Incorrect categorization - Delayed troubleshooting	- Automatically classified tickets - Consistent categorization - Reduced manual triage - Better-organized workflow - Automatic requester notification
