

PROJECT DESIGN PHASE-II

Customer Journey Map

Date	
Team ID	
Project Name	Auto-Ticket Classification using Flow Designer
Maximum Marks	4 Marks

Scenario

A student experiences an IT problem, raises a School IT Ticket, the system classifies the request automatically, and the helpdesk continues the service process.

Customer Journey

Stage	Typical experience	Interactions / touchpoints	Goal / motivation	Positive moment	Negative moment / Area of opportunity
Entice	Student notices an IT problem and decides it needs help.	Classroom, library, lab or office; may ask a teacher or staff member.	Help me report the issue without needing technical knowledge.	The problem is recognized and a support route is identified.	Neg: Unclear who to contact. Opp: Make ticketing link visible.
Enter	Student opens the ticketing service and sees the submission fields.	School IT Tickets form in ServiceNow.	Provide a simple form with clear fields.	Only basic fields are required.	Neg: Concern about selecting categories. Opp: Keep category optional.
Engage	Student fills in caller information and describes the problem.	Caller and Short Description fields; submit action.	Allow me to describe the problem in my own words.	Quick submission without technical terminology.	Neg: Uncertainty about format. Opp: Helpful short description prompt.
Exit	System receives the ticket and Flow Designer applies the rules.	Ticket created in ServiceNow; automated workflow executes.	Tell me the request was received and show me what was assigned.	Automatic category assignment and immediate email notification.	Neg: Wondering if received. Opp: Acknowledgment email.
Extend	Helpdesk reviews the categorized ticket and continues support.	School IT Tickets list; helpdesk technician interface.	Keep ticket records organized for resolution and review.	Ticket arrives pre-categorized for technician action.	Neg: Unclassified requests. Opp: Expand keywords.

Customer Journey Process Flow Explanation

Five-Stage Journey Flow Breakdown:

The customer journey transitions through five structured phases: (1) **Entice**: The student recognizes an issue and locates the School IT helpdesk route; (2) **Enter**: The student accesses the streamlined submission form; (3) **Engage**: The student inputs caller identity and describes the problem in plain English; (4) **Exit**: Flow Designer triggers automatically to classify the record and sends an email acknowledgment; (5) **Extend**: The helpdesk technician receives a structured, pre-classified ticket in their queue for prompt resolution.

Implementation Evidence

ServiceNow School IT Ticket TKT0000012

Number: TKT0000012 Caller: System Administrator

Short description: WiFi not working in library

Description:

Category: Networks Assigned Group:

Subcategory: WiFi Assigned to:

State: New

Journey Validation Analysis

The implementation evidence directly verifies the successful execution of the customer journey stages:

- Figure 1 validates the *Enter* and *Engage* stages: students are presented with a clean, uncluttered interface requiring only essential details.
- Figure 2 validates the *Extend* stage: tickets appear in the helpdesk list with appropriate status and classification data populated.
- Figure 3 validates the *Exit* stage: the requester receives immediate confirmation that their support request has been logged and classified.
