

PROJECT DESIGN PHASE-II

Solution Requirements (Functional & Non-functional)

Date	
Team ID	
Project Name	Auto-Ticket Classification using Flow Designer
Maximum Marks	4 Marks

Functional Requirements

The functional requirements define what the solution must do for the student, helpdesk technician, and administrator.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Ticket Submission	Enter Caller; enter Short Description; create the School IT Ticket record.
FR-2	Automatic Classification	Check the Short Description for supported keywords; assign Category; assign Subcategory.
FR-3	Dependent Classification	Make Subcategory dependent on Category and show the relevant choices.
FR-4	Email Notification	Send an acknowledgment email to the Caller after ticket creation.
FR-5	Ticket Processing	Store and display School IT Ticket records for helpdesk processing.
FR-6	Security and Change Tracking	Apply access controls and capture configuration changes in the Project Update Set.

Non-functional Requirements

The non-functional requirements define the quality attributes, usability, security and performance standards of the solution.

NFR No.	Characteristic	Requirement Description
NFR-1	Usability	The student ticket form should require only basic fields to report an issue.
NFR-2	Security	Access to the custom ticket table should be controlled using roles and ACLs.
NFR-3	Data Consistency	Category and Subcategory values should match the configured Category and Subcategory values.
NFR-4	Performance	Classification should occur automatically after record creation for supported requests.
NFR-5	Availability	The application should be accessible through the ServiceNow School IT Tickets module.
NFR-6	Scalability	The same Flow Designer logic can process repeated School IT Ticket records.

Requirement Evidence

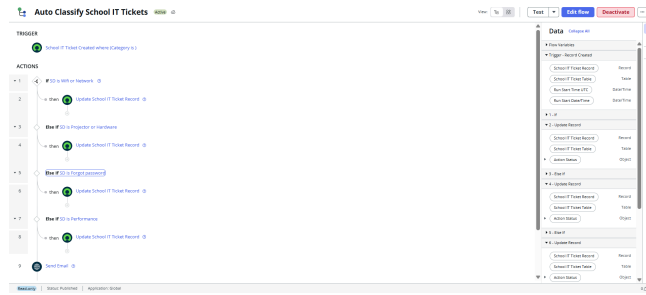

Figure 1: Flow Designer implementation of the automatic classification requirement.

servicenow | < | Home IT Ticket | School IT Ticket - TK1T00010912 | Search | > | Update | Delete | ↑

Name:	BANKINGCARE		Caller:	System Administrator	
Short description:	Wi-Fi not working in library				
Description:					
Category:	Network	Assigned Group:			
Subcategory:	Wi-Fi	Assigned to:			
Status:	-- Name --				

Figure 2: School IT Ticket form used for submission.

The screenshot shows the ServiceNow interface for 'School IT Tickets'. The table has columns: Number, Assigned Group, Assigned to, Caller, Category, Description, Short description, State, and Subcategory. There are three rows of data.

Number	Assigned Group	Assigned to	Caller	Category	Description	Short description	State	Subcategory
TKT0001010	(empty)	(empty)	(empty)			Wi-Fi not working in library		
TKT0001013	(empty)	(empty)	System Administrator	Hardware		Projector not turning on		
TKT0001011	(empty)	(empty)	System Administrator			Wi-Fi not working in library		
TKT0001012	(empty)	(empty)	System Administrator	Network		Wi-Fi not working in library		

Figure 3: Created School IT Ticket records.

Requirements Verification Summary

The implementation evidence demonstrates that all functional and non-functional requirements have been satisfied:

- **FR-1 & NFR-1:** Figure 2 confirms the simplified submission form requiring only Caller and Short Description.
- **FR-2, FR-3 & NFR-4:** Figure 1 illustrates Flow Designer condition branches that evaluate keywords and update Category/Subcategory automatically upon ticket creation.
- **FR-5 & NFR-5:** Figure 3 shows created ticket records displayed in the School IT Tickets list view, accessible to helpdesk staff.
- **FR-6 & NFR-2:** Access controls (ACLs) protect table operations, while Update Sets capture all schema and workflow modifications.
