

Project Design Phase

Problem - Solution Fit Template

Project Name	Auto-Ticket Classification using Flow Designer
Maximum Marks	2 Marks

Purpose / Vision

Simplify school IT support by allowing students to submit basic issue information while the ServiceNow system automatically classifies supported requests and acknowledges the submission.

Problem - Solution Fit Canvas

1. CUSTOMER SEGMENT(S) Students who use the school IT helpdesk. Secondary customer: IT helpdesk technicians.	6. CUSTOMER CONSTRAINTS Limited technical knowledge, uncertainty about categories, need for a quick submission process, and reliance on access to the school helpdesk system.	5. AVAILABLE SOLUTIONS Manual helpdesk triage, asking a teacher or technician for help, describing the problem directly to the helpdesk, and selecting categories manually.
2. JOBS-TO-BE-DONE / PROBLEMS Student: report an IT issue quickly and reach the correct support process. Technician: classify and process incoming requests efficiently.	9. PROBLEM ROOT CAUSE The helpdesk receives varied issue descriptions while students may not understand internal technical categories. This creates manual classification work for technicians.	7. BEHAVIOUR Students notice an IT problem, open School IT Tickets, enter Caller and Short Description, and submit. Technicians review the resulting ticket records.
3. TRIGGERS Wi-Fi failure, projector problems, forgotten passwords, login issues, slow computers, or hanging systems trigger a support request.	10. YOUR SOLUTION A custom School IT Ticket table with Flow Designer automation. Keywords in Short Description determine Category and Subcategory, followed by an email acknowledgment.	8. CHANNELS OF BEHAVIOUR 8.1 ONLINE: ServiceNow School IT Tickets interface and email. 8.2 OFFLINE: Classroom, library, laboratory or office where the issue is noticed; direct discussion with staff may occur.
4. EMOTIONS: BEFORE / AFTER		
Before: confusion about which category to choose, concern about submitting the wrong information, and frustration caused by manual triage. After: greater confidence that the request has been classified and acknowledged, with less uncertainty for the requester.		

Fit Summary: The proposed solution addresses the main problem identified for both user groups. The student provides simple information instead of making a technical classification, while the helpdesk receives a structured record that can be processed consistently.

Problem - Solution Fit - Implementation Evidence

The following screenshots are from the implemented ServiceNow project and provide supporting evidence for the fit between the identified problem and the implemented solution.

The screenshot shows a ServiceNow form for a 'School IT Ticket' with the ID TKT0001012. The form includes fields for 'Number' (TKT0001012), 'Caller' (System Administrator), 'Short description' (Wi-Fi not working in library), and 'Description'. Below these are dropdown menus for 'Category' (Network), 'Subcategory' (Wi-Fi), and 'State' (None). There are also fields for 'Assigned Group' and 'Assigned to'. At the bottom of the form are 'Update' and 'Delete' buttons.
