

Project Design Phase

Solution Architecture

Date	
Team ID	
Project Name	Auto-Ticket Classification using Flow Designer
Maximum Marks	4 Marks

Solution Architecture

The solution architecture describes how the business requirement for simpler school IT ticket submission is connected to the ServiceNow technology components. The design separates the user interface, ticket data, automation logic, notification service, and controlled configuration.

Architecture Objectives

- Provide a simple entry point for students to submit an IT request.
- Store requests in a dedicated School IT Ticket table.
- Automatically classify supported issues using Flow Designer rules.
- Notify the caller after the request is received.
- Maintain security and controlled changes through ServiceNow roles, ACLs, and Update Sets.

Solution Architecture - Auto-Ticket Classification

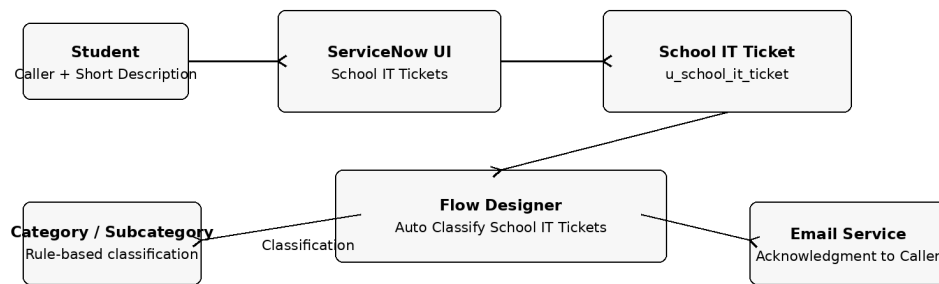

Figure 1: Solution architecture and data flow of the School IT ticket classification system.

Architecture Components

Component	Role in the solution	Technology
User Interface	Students enter Caller and Short Description and access School IT Tickets.	ServiceNow Next Experience
Ticket Data	Stores Number, Caller, Category, Subcategory, Short Description, Description, State, Assigned Group and Assigned To.	Custom table: u_school_it_ticket
Automation Logic	Checks the Short Description and updates Category and Subcategory for supported issue types.	ServiceNow Flow Designer
Notification	Sends an acknowledgment email to the Caller after ticket submission.	ServiceNow Email / SMTP
Security	Controls access to the custom table and its records.	ServiceNow ACLs and Roles
Change Management	Captures configuration changes for deployment and auditability.	ServiceNow Update Sets
