

Project Development Phase

Functional & Performance Testing Template

Date	
Team ID	
Project Name	Auto-Ticket Classification using Flow Designer
Maximum Marks	

Test Scenarios & Results

The testing document follows the supplied Functional & Performance Testing template. The tests are adapted to the implemented ServiceNow solution and use the evidence available from the project screenshots. Unsupported measurements are marked Not Executed or N/A rather than assigned unverified values.

Test Case ID	Scenario (What to test)	Test Steps (How to test)	Expected Result	Actual Result	Pass/Fail
FT-01	Ticket text submission	Open School IT Tickets; enter Caller; enter a supported issue in Short Description; submit.	A School IT Ticket record is created with the submitted information.	The test ticket was created with a Wi-Fi issue in Short Description.	Pass
FT-02	Automatic classification	Create a ticket with 'Wi-Fi not working in library' and leave Category/Subcategory unselected; save and review.	Category becomes Network and Subcategory becomes Wi-Fi.	The ticket shows Category = Network and Subcategory = Wi-Fi.	Pass
FT-03	Classification examples	Review created tickets for supported issue types and compare the resulting categories.	Supported issue keywords map to the configured Category and Subcategory.	The ticket list confirms a projector request classified as Hardware and a Wi-Fi request classified as Network.	Pass
FT-04	Email notification	Create a ticket with a valid Caller; allow the published flow to run; inspect System Logs > Emails and preview the message.	An acknowledgment email is generated for the Caller.	The email log contains the notification and the preview confirms receipt and automatic categorization.	Pass
PT-01	Response time test	Measure the time between ticket creation and completion of automatic classification.	Response time is measured and recorded.	No timer or execution-time measurement is present in the supplied evidence.	Not Executed
PT-02	Concurrent API speed test	Send multiple API calls at the same time.	API remains responsive under concurrent calls.	N/A because the implemented solution does not use a third-party API for classification.	N/A
PT-03	File upload load test	Upload multiple files and observe processing.	Files process without failure.	N/A because file upload is not part of the implemented School IT Ticket workflow.	N/A

Testing Evidence - Functional Workflow

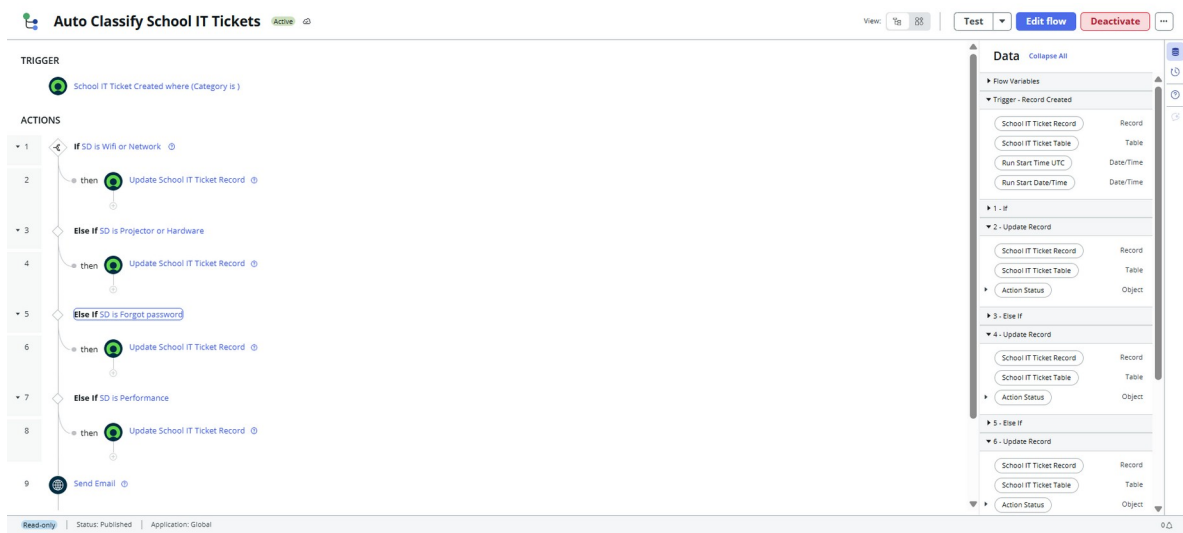

Figure 1: Published Auto Classify School IT Tickets Flow Designer workflow.

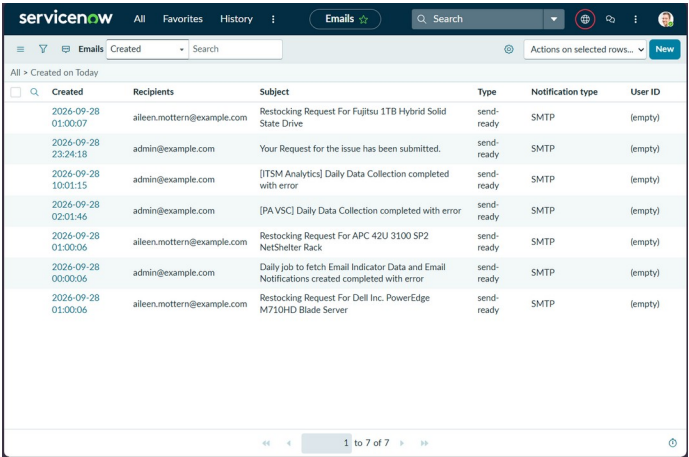

The form displays the following information: Number: TKT0001012, Caller: System Administrator, Short description: Wi-Fi not working in library, Description: (empty), Category: Network, Subcategory: Wi-Fi, State: -- None --, Assigned Group: (empty), Assigned to: (empty). Buttons: Update, Delete.

Figure 2: School IT Ticket showing Category = Network and Subcategory = Wi-Fi.

Number	Assigned Group	Assigned to	Caller	Category	Description	Short description	State	Subcategory
TKT0001010	(empty)	(empty)	(empty)			Wi-Fi not working in library		
TKT0001013	(empty)	(empty)	System Administrator	Hardware		Projector not turning on		
TKT0001011	(empty)	(empty)	System Administrator			Wi-Fi not working in library		
TKT0001012	(empty)	(empty)	System Administrator	Network		Wi-Fi not working in library		

Figure 3: School IT Tickets list showing created records and classification results.

Testing Evidence - Notification

The screenshot shows the ServiceNow 'Emails' interface. At the top, there's a navigation bar with 'All', 'Favorites', 'History', and 'Emails' (selected). A search bar is present. Below the navigation bar, there's a filter 'All > Created on Today' and a 'Created' dropdown menu. The main area displays a table of email notifications. The table has columns: Created, Recipients, Subject, Type, Notification type, and User ID. There are 7 rows of data. The status bar at the bottom indicates '1 to 7 of 7'.

Created	Recipients	Subject	Type	Notification type	User ID
2026-09-28 01:00:07	aileen.mottorn@example.com	Restocking Request For Fujitsu 1TB Hybrid Solid State Drive	send-ready	SMTP	(empty)
2026-09-28 23:24:18	admin@example.com	Your Request for the issue has been submitted.	send-ready	SMTP	(empty)
2026-09-28 10:01:15	admin@example.com	[ITSM Analytics] Daily Data Collection completed with error	send-ready	SMTP	(empty)
2026-09-28 02:01:46	admin@example.com	[PA VSC] Daily Data Collection completed with error	send-ready	SMTP	(empty)
2026-09-28 01:00:06	aileen.mottorn@example.com	Restocking Request For APC 42U 3100 SP2 NetShelter Rack	send-ready	SMTP	(empty)
2026-09-28 00:00:06	admin@example.com	Daily job to fetch Email Indicator Data and Email Notifications created completed with error	send-ready	SMTP	(empty)
2026-09-28 01:00:06	aileen.mottorn@example.com	Restocking Request For Dell Inc. PowerEdge M710HD Blade Server	send-ready	SMTP	(empty)

Testing Note

The functional tests marked Pass are supported by the submitted screenshots and project details. Performance cases requiring measured timing, concurrent-load results, or file-upload behaviour are left as Not Executed or N/A where the implemented project does not contain that feature or the required measurement evidence was not supplied.
